MIXING INSTRUCTIONS

TANK MIXES: Do not mix with pesticides or other chemicals without a compatibility test. An adequate test for compatibility involves mixing in a small container the proper proportions of the product with water and the other ingredients. Agitate and let stand for one hour. If a precipitate forms then apply the products separately.

Krystal Klear ResQ will disperse in water with little or no agitation. Many pesticides can be applied with Krystal Klear Turf Mix. Follow this mixing sequence: Water, Krystal Klear ResQ and pesticide.

TANK BUFFERING: Water with a pH greater than 6 may diminish pesticide efficacy by way of alkaline hydrolysis. Nutrol™, a registered buffer, may be used to lower and maintain the pH of a spray tank and improve application efficacy.
