

Krystal Klear®

AGRA MIX

The Product

- **Krystal Klear® Agra Mix** is a patented micronutrient solution containing 2% Copper, 2% Manganese, 2% Zinc and 0.5% Boron.
- **Krystal Klear Agra Mix** is formulated with Baypure™ from Lanxess Chemical.
- Baypure is effective in a wide range of pH.
- Baypure biodegrades within 72 hours....unlike others that persist in the soil.
- **Krystal Klear Agra Mix** is ortho- and poly-phosphate compatible.
- Boron regulates the metabolism of carbohydrates in plants.
- Boron deficiency is more prevalent in calcareous, alkaline soils.
- Copper is essential for growth and activates many enzymes.
- A copper deficiency interferes with protein synthesis and causes a buildup of N compounds.
- Manganese activates certain phosphate-transferring enzymes which affect many metabolic processes.
- Zinc is essential for plant growth because it controls the synthesis of indoleacetic acid, which dramatically regulates plant growth.
- Zinc is active in many enzymatic reactions.

Guaranteed Analysis

Boron (B)	0.5%
0.5% Boron (B)	
Copper (Cu)	2%
2% Chelated Copper	
Manganese (Mn)	2%
2% Chelated Manganese (Mn)	
Zinc (Zn)	2%
2% Chelated Zinc (Zn)	

Derived from: Boric acid, copper sulfate, manganese sulfate, monoethanolamine (MEA), zinc oxide, EDTA acid and water.

APPLICATION RECOMMENDATIONS

• Foliar Application

Vegetables: Apply 1/2 to 1 quart per acre each spray. Krystal Klear Agra Mix can be incorporated into the normal spray program.

Field Crops: Apply 1 quart per acre when plants are young. This is the time when the most severe deficiencies occur.

Tree and Vine Crops: Apply 1 quart per 125 gallons of spray mixture. If concentrated spray is used, increase the concentration in direct proportion to the dilution. The above amount can be split into several applications. Split applications are more beneficial than a single application.

• Aerial Application

Consult your local agronomist for aerial application rates and dilutions.

• Soil Application

Krystal Klear Agra Mix is recommended for use on all types of soils. Dilute before use to ensure uniform coverage. The product can be incorporated into liquid fertilizers or applied separately. Soil applications may be made by drip, sprinkler or band application. If you do not have a soil or leaf analysis then apply the following rates:

Maintenance Application:	1 quart per acre
Moderate Deficiency:	2 to 3 quarts per acre
Heavy Micronutrient Deficiency:	4 quarts per acre
